## **COVID-19 RESPONSE FROM PERRONE AEROSPACE**

March 9, 2020

Perrone Aerospace is dedicated to ensuring that our customers possess the resources to provide the most sanitary environment for all passengers while maintaining the highest quality and performance of all (genuine leather and synthetic) products we supply.

We do not recommend the use of jellied alcohol (hand sanitizer), any alcohol or ammonia-based cleaners or other commercially available disinfectants for the cleaning of Perrone genuine leather or textile products. Historically, these and other similar products have been shown to damage the finish system of most of our products and may cause premature wear, discoloration, color transfer, and potential void of warranty as outlined in PQP-183 Rev. C.

Perrone Aerospace All Leather Maintenance line of cleaning products help to provide a more sanitary environment when used as directed on both the product label and attached PQP-183 Rev. C dated 9-11-19. The chemical and mechanical action of cleaning with Perrone Aerospace line of chemicals assists in the simple removal of soils and particulate matter that can harbor viruses, bacteria and fungus. Perrone Aerospace recommends that the cleaning instructions are followed exactly as directed and to keep in mind that applying more product than recommended will not necessarily result in improved cleaning results.

Additionally, we would like to remind our customers that Perrone Aerospace operates an FAA Part 145 Repair Station and is certified to provide both maintenance and cleaning services for your dress covers in the event that off-wing cleaning is required.

As always, please do not hesitate to contact us directly if you have any questions.

Thank you.
